Before the exercises

Use your institution's VPN

ETH-Guest / eduroam may lack access.
UZH VPN tested.

GPT-5.6+ · High reasoning or above

Free Luna was slow and missed instructions
in our tests.

Visible tabs for the workshop

Observe the agent as it works.
Use background tabs for daily searches.

Example: website security check

nph.onlinelibrary.wiley.com

Performing security verification

This website uses a security service to protect against malicious bots. This page is displayed while the website verifies you are not a bot.

Wait for verification; respond if prompted.

Exercise 1 · Compare search tools

Choose search tools that find your field's key papers.

1 Choose a familiar topic

List its key papers as your ground truth.

2 Use @paper-search in comparison mode

Use the same topic, filters and paper limit.

3 Compare coverage and ranking

Which key papers appear? Which are missing?

Save the comparison and your preferred tools.

Exercise 2 · Query fan-out

Find relevant papers that one wording misses.

Use @paper-search to search the same question with different terms.

Example: does caffeine delay falling asleep?

PubMed variants found two papers missing from the original top 10

[Caffeine and subsequent sleep · meta-analysis](#)

[Dose and timing effects of caffeine · clinical trial](#)

Exercise 3 · Update the agent's understanding

Correct outdated context with your domain expertise.

Discuss your topic, then use @paper-reading on recent papers from exercise 2.

Example: can adult brains produce new neurons?

2018

One study found no detectable formation of new neurons in the adult hippocampus.

2026

A study found cells and molecular signals supporting new-neuron formation in adults.

Discuss → **Read papers** → **Review evidence** → **Save context** → **Reuse**

Revise the saved context as your research progresses.

Exercise 4 · Routine automated searches: e.g. weekly

Automate literature searches every week or month.

@paper-watch reuses your saved work

Exercise 1

Preferred tools

Exercise 2

Tested queries

Exercise 3

Reviewed context

Confirm how often to run, the paper limit and Zotero collection.

Example: every Monday at 09:00, or the first day of each month.

Routine search → Save to Zotero → Read findings → Your review

Updates: new papers, findings and reading suggestions.
Context changes need your review.

Keep the computer awake, with Codex and Zotero open.

Legal reminder

Follow university and journal regulations

Here, we demonstrate what AI agents can do for educational purposes.
You should also abide by your university's and publishers' guidelines and rules.

<u>UZH</u>	No systematic downloads without a permitted route. <u>AI use of licensed full texts needs explicit permission.</u>
<u>ETH</u>	Subscription analysis: ETH members, non-commercial research. Contact the library before starting.
<u>Basel</u>	No systematic downloads of whole issues, e-books or large database portions. Uploads to external AI services can count as third-party sharing.
<u>Elsevier</u>	Automated full-text analysis: register for the dedicated download API. Follow its rate limits and terms.
<u>Wiley</u>	Use the approved download API, not webpage scraping. Check your institutional agreement before accepting API terms.
<u>Springer Nature</u>	Non-commercial analysis permitted. Direct downloads: at most one request per second.
<u>PLOS</u>	Analysis and reuse allowed. Use bulk-download tools for large collections.

[Swiss Copyright Act, Art. 24d permits technically necessary scientific research copies with lawful access.](#)
